# Overview

Version 4.1.6 of IDPMS is built upon the Embarcadero Delphi 10 programming language. This will provide new options for our developers to improve the user experience in the future.

Changes made in this version are mostly regarding optimization for the upcoming APMA product and might not be visible or available for On-Premise IDPMS users.

It also contains additional enhancements and bug fixes.

## Update schedule

Amadeus IDPMS version 4.1.6 will be delivered to your hotel through the IDPMS On-premise Update Module (OPU). For hotels running IDPMS v3.16.4 or higher, the deployment is announced via the IDPMS e-mail module for selected users.

The time between announcement and actual update may vary per hotel, as the deployment will be done in smaller batches of hotels.

**! Note:**

- Hotels that have the On-premise Update (OPU) Setting not set to “Full Install” are NOT updated automatically.
- Multi property environments or hotels that have IDPMS running on a terminal server environment are also NOT updated automatically.
- Hotels on the Amadeus Property Management – Advanced platform will be updated using a different method

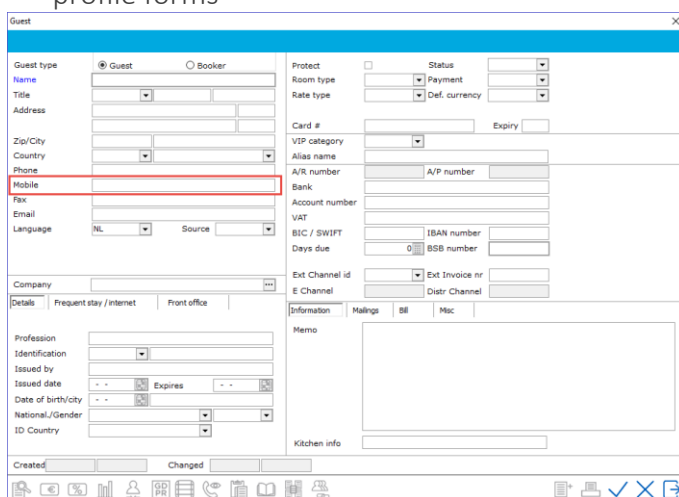

If the above applies to your hotel or if you would like to have this update scheduled, please contact the Amadeus Support Team to schedule an update.

# New Features

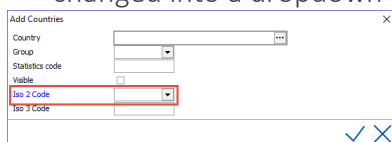

The following pages describe the new features, bugfixes and other enhancements of Amadeus IDPMS version 4.1.6. For some items a more detailed explanation can be found further down the document.

## Bugfixes and features in initial release

- 101966: In Delphi 10, the issue where IDPMS minimizes after logging in is resolved
- 104142: Improved layout of userdefined fields in Company, Travelagent and Guest profiles (Change request CR0132512)
- 106011: Added a check mechanism to IDPMS to determine if Interface logging was already purged for the current day. This should prevent unwanted data loss for logging.
- 107586: The 2<sup>nd</sup> phone number field has been moved and is now labelled “Mobile” in all profile forms

- 107601: The Iso 2 code field in the country configuration is now mandatory and has been changed into a dropdown that provides a pre-configured data-set.

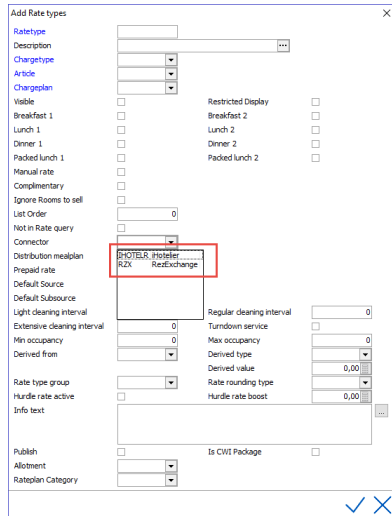

- 115990: Fixed issue where update on CC data in guest profile using tokenization was not properly processed in the database
- 116272: Introduced possibilities to use Blobstorage for storing and retrieving documents and reports

## 117579: Added a property configuration type field to the hotel definitions

The screenshot shows a software interface for editing hotel definitions. A dropdown menu for 'Alternate User Property' is highlighted with a red box and contains the option 'Configuration'. Other fields include 'User property code' (ENS), 'Relation property code' (ENS), 'Property name' (Amadeus IDPMS), 'Chain code', 'Brand', 'Property type', 'Get offset' (0,00), 'Address', 'City', 'Country', 'Phone 1', 'Phone res', 'Fax', 'Email', 'Areas served', 'Check-in time', 'Guarantee', 'Cancellation', 'Year built', 'Native currency', 'Longitude' (0,00000), 'Latitude' (0,00000), 'Info', 'CWT Published' (checkbox), and 'Hotel Active' (checkbox).

- 119123: Now using correct relation property at check-out of a reservation to determine email address
- 119125: Removed incorrect error when making (partial) refund by addressing incorrect storage of CC data when using CCV
- 119482: Fixed an issue where the wrong reservation would be opened when using the banqueting rack to access the reservation
- 119503: Fixed an error upon printing an item in IDPMS mail which caused IDPMS to close.
- 119636: Resolved an issue where the page orientation (landscape/portrait) of a report was ignored when printing
- 119674: Guest information on invoices will no longer be limited to 20 characters
- 119677: Corrected an issue where an error message was produced after changing a date in a master activity that already has a master calculation linked
- 119685: IDPMS should no longer shut down when errors are encountered opening a confirmation letter
- 119693: Added Tokenization using Adyen as provider
- 119697: Removed several fields and menu items in APMA mode
- 119699: Added Active Directory integration when in APMA mode
- 119701: Introduction new report designer (FastReport)
- 119708: Increased maximum number of characters allowed to be entered in reservation form in "Reference" and "Reference 2" fields.
- 119723: Shortcut keys should be working normally again
- 120791: Improved how language settings are stored in and fetched from the database
- 120895: Fixed incorrect logging of User Login in database
- 120990: A different logo will be shown when in APMA mode
- 121011: Improved performance of IDPMS when using scaling in windows
- 122121: Fixed an issue where incorrect client PC name was fetched to determine if a workstation was linked to a credit card terminal.
- 122642: Fixed an error which occurred when adding a calculation to a (master) activity resulting in IDPMS freezing.
- 122738: In APMA mode, closing of IDPMS will result in logging off the windows session

123152: Reduced the number of connectors in the rate type configuration

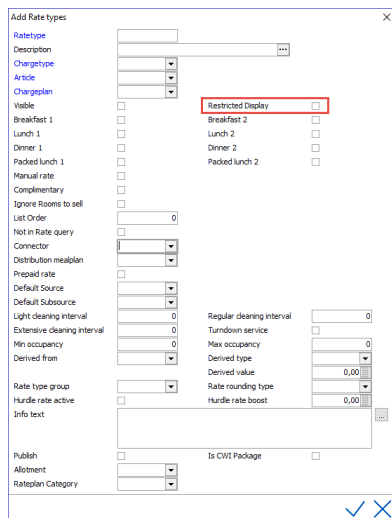

123443: Fixed an issue where an error was produced in the editor when files used were set to “read only”

123628: Introduced tokenization using Amadeus Payments

123651: Improved the possibilities of using special characters (like ä and ü) in the editor

123819: Added tick box 'Restricted display' to the rate type configuration for future usage

125273: Fixed an issue where progress bars and some other windows stayed active above all other applications. Now these are only shown when IDPMS is active. Also improved logic, so progress bars are closed more quickly after the process has been completed

125376: Added Windows Username to logging for IDPMS logoff and lock when in APMA mode and using Active Directory

125419: References to “IDPMS” will change to “PMS” (for example “IDPMS mail” will become “PMS mail”)

125607: When adding text in the mail body in IDPMS, pressing Enter will no longer send the mail, but will set cursor on next line. (Change Request CR0133199)

126003: Fixed an issue where the incorrect sub language was fetched from database when determining available languages in IDPMS

- 126600: Fixed the functionality to click on columns (and use for filtering) in a browse window
- 126666: Cancelling changes in a reservation will no longer close the reservation form, but instead return it to its original state
- 126682: When a hotel runs night audit it will be considered an active PMS and will be flagged as active in the hotel definitions
- 126688: Increased the size of the parameter 1 field in autorun procedures for increased usability in APMA mode
- 126895: Fixed an issue where the detokenization call was not made after a guest profile contained token.
- 127196: The method of opening financial shifts has been changed.
- 128089: Disabled the GMT time offset field in Hotel Definition
- 128309: Improved tabbing order in GUEST profile form
- 128323: Fixed an error where the EFT debug log was created while disabled. Also fixed automatic disabling of logging in EFT debuglog. Fixed deletion of EFT debug log file when night audit deactivates the logging after set timeframe.

## Bugfixes after initial release

- 128920: Fixed an error previewing an invoice after the Business Intelligence module was used (4.1.6.54)
- 107570: User is no longer allowed to save AR payment in group reservation when no valid AR number is present (CR0132591) (4.1.6.55)
- 125624: It is no longer possible to store a reservation without mealplan when MEALPLAN is a mandatory field (CR0133198) (4.1.6.55)
- 129512: Updated logo and splash screen when running PMS in APMA environment (4.1.6.56)
- 129568: Disabled purge of interface traffic tables via PMS when running in APMA environment (4.1.6.56)
- 130590: Added new version number to PMS to allow start using HCCrypto 1.5.4 (4.1.6.57)
- 129034: Improved the way blobstorage paths are working from IDPMS (4.1.6.58)
- 129517: Updated authentication method for OrangeBox integration to use LSS authentication (4.1.6.58)
- 126219: Changed startup restrictions, now allowing more than 1 instance of PMS for different properties running in APMA environment (4.1.6.59)
- 126676: Fixed an error that occurred when IDPMS was updated through the automatic update procedure. (4.1.6.59)
- 130412: Added a check when closing the PMS, so in case multiple instances are running in APMA environment, these will not be logged off as well. (4.1.6.59)
- 131067: Adjusted restriction on start of IDPMS, now allowing more than 1 instance of the same hotel to be started when not running in APMA. (4.1.6.59)

- 131715: Authentication method for the OrangeBox is now optional for backwards compatibility (4.1.6.60)
- 131216: Changed the focus to button "None" when creating an invoice (4.1.6.61)
- 133171: Improved error logging (4.1.6.61)
- 133396: Re-enable 'Guest no history' option in IDPMS when Enzo interface is enabled (4.1.6.63)
- 134808: Fixed issue where profiles could were unintentionally copied when cancelling a copy action (4.1.6.64)
